#### **Curriculum Vitae**

Independent Software Consultant and Game Developer

Thomas Marcus Basse Fønss Gjørup

Kærsholms Møllevej 8, DK-8620 Kjellerup, Denmark

tg@brainphant.com - tel. (+45) 60 14 77 87 - www.brainphant.com

#### **Professional Profile**

Being blessed with an early interest in computers, I got involved in the software industry during my high-school years; working with PC magazines as a writer and software editor I got connected to a few computer game companies here, there and abroad and turned my hobby into a career while studying Computer Science and Physics in Aarhus.

My experience doing programming, graphics, sound and music for a multitude of games on the early home computers provided me good training for the more competitive world of video console games; I started working for a couple of California-based companies and co-authored and developed games that were successfully published for the Sega Genesis system.

After creating a 3D terrain rendering engine for a PC-based game project I returned from the States to join Interactive Vision, a Danish game developer, as Head of Development. We published the helicopter game "Search and Rescue", instigating a successful sequel of flight simulator titles. My main projects for this company became the construction of a modularized and reusable game framework (3D graphics engine, 3D sound engine, physics simulation, network play, device drivers and tools) and the development of the futuristic 3D shooter "B-Hunter".

The years in the competitive and dynamic computer game industry - when the battle was fought on having the best proprietary middleware such as physics simulators and hand-optimized graphic pipelines - have trained my skills at paying attention to the quality of details - and the details of quality. And even if my early career (and the fact that I started building a family at the time) was prolonging my studies, I earned some good experience points envisioning, building and successfully shipping large and robust systems and doing technical lead and mentoring for younger team members.

Graduating from the University of Aarhus in 1999, I started working for Mjølner Informatics, an IT consultancy company touching down on various industries including telecom, defense and the electronics industry. Working at Mjølner for 8 years has broadened my scope and taught me solid, senior level skills that complement my studies and my experience from the creative game industry; Due to the nature of work at Mjølner at the time (in-sourcing technically demanding projects from various industries) I have been involved with numerous industrial customers and projects, giving me valuable insight in architectures for embedded platforms, for telecom and network communication and for enterprise solutions, in quality assurance for mission critical systems, test methodologies and software process improvement.

After 8 years at Mjølner I sought new horizons and accepted a position as Software Engineer with focus on 3D software at Lego. I have been contributing to Lego's published digital brick building software, but my main involvement has been with the internal construction and transformation pipeline for Lego's digital 3D assets, supporting existing workflows and new business initiatives and tying 3D software solutions together, cross-organizational-wise, for internal and external customers.

In 2008 I heeded a long-growing urge to stand on my own feet and I launched, as sole proprietor, my independent game development and software consultancy business called Brainphant. Since then I have successfully been running this business with several short and long term involvements with various customers while having the opportunity to engage in interesting and technically challenging projects on my own. I have designed and developed a proprietary 3D platform for iPhone OS and Windows, and in early 2010 Brainphant published its first entirely home-grown, one-man iPhone project, the well-received game "Vertigo Roque".

As an independent consultant, I've continued the work with improvements on the tool chain and 3D asset pipeline at Lego, I've helped Danish ebay successfully develop and launch the first version of the 'Den Blaa Avis' customer-to-customer iPhone app (immediately becoming the #1 downloaded app in Denmark), and I've helped prototype and develop an augmented reality iPhone app bringing a medieval castle in Jutland back to life.

Starting in 2011 and through the following 6+ years I did consulting work for Bromium Inc., a Silicon Valley company with offices in Cupertino (US), and Cambridge (UK), producing cutting-edge security software using next generation virtualization technologies. The work on this highly technical and complex security product (which hooks into the Windows stack at virtually any level) has given me both deep and broad insights into OS architecture and implementation spanning e.g. boot-level kernel drivers, file system filters, hypervisors, services, inter-process communication, installation technology and advanced upgrade architecture - while constantly balancing implementation issues with UI and UX considerations and customer requirements.

In 2017 and 2018 I've been consulting in an agile environment for a major Danish company, developing 3D modelling and documentation tools for internal use and interfacing with elaborate (and continuously restructured) production database systems. Specifically, I've developed complex and innovative algorithms for analyzing and modifying 3D assets for this system.

Since Summer 2018 I've been engaged in full-stack development in the financial sector, implementing business logic for containerized deployment on modern platforms and adapting to emerging, statutory banking standards, specifically focusing on authentication and authorization in a PSD2 context.

In February 2019 I published the mobile game Runny Duck for IOS and Android, a hobby project and the type of one-man endeavour that I fancy in my spare time to train my skills at end-to-end project management and development, to learn new technologies, to stay sharp and to balance my work life between the colorful, creative arts and the more academic, technical challenges of computer science, both of which I enjoy and depend on in order to thrive.

As such, my experience and interests have always had a broad scope and are exploratory and expanding by nature rather than limited to a narrow focus on a few technologies. I'm not scared of new areas and I'm particularly passionate about mobile development, 3D graphics at large, building sound and robust architecture, meeting customer needs above and beyond, and areas of high technical challenge in general.

I was born in January 1970 and live in Silkeborg in central Jutland. I am open minded with a positive attitude and a "just let's do it!" mindset, never considering a challenge insurmountable. I think of myself as a polite, relaxed and creative person who enjoys cooking, running, reading & writing, playing music, doing nerdy computer projects as a hobby and spending humorous time with other people.

## **Professional Summary**

I consider myself very innovative with a flair for developing an overall understanding of problems while retaining focus. I have worked with computer graphics programming for more than two decades and have experience in technical leading and coordination of projects, including object-oriented design, test methodologies and architectural experience and skills. I have a passion for technical aspects such as optimization and algorithmic challenges; experience with and talent for analyzing complex and performance critical scenarios and delivering effective and well-balanced solutions.

I have an extensive knowledge of a broad range of hardware platforms, experience with software platforms ranging from embedded and mobile operating systems to enterprise frameworks and I am specialized in 3D graphics, the math behind it and the aggressive, low-level performance optimizations bringing it to life.

Running my own business, working with software publishing and negotiating terms and requirements with external customers for many years has provided me an important understanding of the coupling between the

technical aspects of project management & implementation and the realm and context of hard-life business requirements.

Naturally, I've been producing as well as presenting documentation in English and Danish during the last decade or more and always enjoyed it as a complement to the more technical parts of the work.

# **Previous Employment**

2008-now	Owner of Brainphant;	
	Software Consultancy and Independent Game Development	
2007-2008	Senior 3D Software Engineer at Lego (4000+ employees);	
	3D Graphics and Tools, 3D Asset Management	
1999-2007	Senior Software Engineer at Mjølner Informatics A/S (~75 employees);	
	Software Development	
1996-1999	Head of Development at InterActive Vision A/S (10-50 employees);	
	Computer Games and Flight Simulation	
1994-1996	Self-employed, full-time Independent Software Consultant and Game Developer;	
	IT-consultancy/development: Game Development and Frameworks, Graphic	
	Engines, Flight Simulators	
1988-1992 and	Freelance Independent Software Consultancy, primarily for Interactivion A/S;	
1999-2002	Software development, primarily Computer Games	
1985-1988	Editor, writer at various Danish computer magazines;	
	Writing reviews and technical articles, programming	

## **Education, Courses, Conferences**

1999	M. Sc. in Computer Science (minor in Physics) from the University of Aarhus		
2000	One week training seminar in Project Management at Delta (www.delta.dk)		
2003	Software Test Seminar at CSI, Sønderborg		
2005	Project Leader Seminar at Mjølner		
2006	Software Architect Seminar at Mjølner		
2006	J2EE Studies (group seminars, exercises) at Mjølner		
2007	Personal Development course, Lego		
2008	Certified trained Adam 4.x Developer (.NET platform, www.adam.be; Training: Ashton Court)		
1994	Consumer Electronics Show, Las Vegas		
1997	Develop '97, game developer conference, London		
2008	Game Developer's Conference (full program), San Francisco		

**Competencies and Experience** 

Roles	Level	Years	Last
Project Manager	High	3+	2010
Technical Lead	High	9+	2006
Developer	High	20+	2021
Architect	Medium	4+	2016
Programming Languages	Level	Years	Last
C, C++ (incl. C++14, C++17)	High	20+	2019
C# / .Net / WPF/xaml	Medium	4+	2021
Assembly (10-12 different platforms)	High	11	2006
Java, Groovy	High	5	2020
Javascript, HTML, CSS	Medium	2	2019
Objective C	High	1	2011
Various scripting and configuration (batch, vbs, python, sh/bash, yaml)	Medium	5	2019

Development Tools and Environments	Level	Years	Last
MS Visual Studio - C++ / VB / C# / .Net	High	15	2021
Unix suite: gcc, gdb, gcov/gprof, valgrind, lint, emacs	High	7	2010
Git, ClearCase, CVS, SVN, Perforce, Gitlab/Bitbucket	High	15	2021
Compaq/Intel compilers & debuggers (Alpha/Itanium)	High	5	2006
IntelliJ / Idea, ant, Gradle	Medium	2	2020
Docker, Vagrant, Helm	Medium	1	2020
Kubernetes/OpenShift, Jenkins, Apigee	Medium	2	2020
Supplementary Competencies	Level	Years	Last
Unity3D	High	4	2020
Qt UI (MVC, Item Models, qss-styling etc.)	Medium	2	2018
IOS and Android	High	3	2019
DirectX, OpenGL, Win32	High	11	2017
Linux / Unix / Solaris / Tru64 (debian, sling, ubuntu,)	High	6	2007
J2EE, Java 8	High	5	2020
MFC, COM	Medium	8	2017
JBoss, Oracle/SQL	Medium	1	2006
RTOS in general (embedded)	Medium	2	2004
WinCE .Net	Medium	1	2004

### **Specific Mobile Competencies and Experience**

Developing applications (both 3D games and 2D consumer apps) using XCode on Mac for iPhone (Apple's IDE for Mac and IOS development)

Developing applications using Unity3D / Mono on Windows, Mac and PC for IOS and Android

Managing Apple developer certificates, application identifiers and provisioning profiles, including Ad-Hoc provisioning (distribution and deployment on external tester's devices)

Rapid testing using iPhone/iPad simulator on Mac

Building 'Universal Apps' (one binary that runs on iPhone, iPod Touch and iPad)

Submitting, publishing and upgrading free and paid apps on Apple App Store and Google Play Store

Programming in Objective-C and C++ (and integration between both languages) on iPhone

Programming in C# and Javascript for iPhone and Android platforms (Unity3D)

Optimization using profiling and other instrumentation with special focus on memory footprint and battery usage

Experience with framework structure and IOS SDK / knowledge base (sample applications and best-practice) on iPhone in general

High level of experience with frameworks for openGL (3D graphics), openAL (sound), accelerometer, GPS, touch input etc.

Writing socket communication between iPhone simulator, physical iPhones and PCs (implementing advanced development and test frameworks)

Implementing semi-automated tool chain for converting audio and 2D image assets to iPhone native formats

Languages	Writt	en Oral
Danish	Nativ	re Native
English	High	High
German	Medi	um Medium
French	Low	Low

### **Major Projects**

The following table provides a comprehensive overview of technologies I have used in various projects and is primarily intended as a reference for someone looking for a specific competence.

2020	Customer:	Financial/banking costor
-2020		Financial/banking sector
-2021	Project: Roles:	.Net backend services, API gateway / continuous deployment pipeline
		Software Engineer Apigee, groovy, jenkins, git, C#, Visual Studio, IIS, MS SQL
	Technologies:	Apigee, groovy, jenkins, git, C#, visuai Studio, ii5, ivi5 SQL
2020	Customer:	Healthcare sector
2020	Project:	Backend systems, performance optim. and monitoring, CDA/HL7 standards
	Roles:	Software Engineer
	Technologies:	JavaEE, linux, IntelliJ, git, jenkins, hibernate, SQL
2018	Customer:	Financial/banking sector
-2020	Project:	Backend systems, implementing business logic and conforming to PSD2
	Roles:	Software Engineer
	Technologies:	Java, Docker, Vagrant, OpenShift, OAuth, Apigee, Jira, Cucumber, Selenium
	, recimience gives	journey 2001.01, ruguern, openioring, or take, ruguern, constitution, constitution,
2017	Customer:	Major Danish/global company (15K+ employees)
-2018	Project:	3D software tools supporting internal processes
	Roles:	Software Engineer
	Technologies:	VS2017/C++, Qt, 3D, OpenGL, git/gitlab, Jira/Confluence, unit test
2011	Customer:	Bromium, Inc. (200 employees)
-2017	Project:	vSentry, Advanced Endpoint Security
	Roles:	Software Engineer
	Technologies:	C++, C#, javascript, python, Windows Installer + WiX, git, hypervisor/VM, Jira
	recimologics.	10.1., On, javasoript, python, vvinaows motalier 1. vvina, git, mypervison vivi, ona
2011	Customer:	ebay / Mjølner
	Project:	'Den Blaa Avis' iPhone App
	Roles:	Software Engineer
	Technologies:	IOS, UI, Objective-C, integration with backend, profiling and optimization,
		deployment, google analytics, JSON
2010 -	Customer:	InnoPro Aps
2010 -	Project:	'Kalø Castle Ruins' IOS App
-0	Roles:	Software Engineer / Consultant
	Technologies:	IOS, UI, Visualization / Augmented Reality, Unity3D, Mono C#/javascript, GPS,
	i comiciogico:	terrain height data and textures, 3D mesh construction and cleanup
2009	Customer:	Alexandra Institute A/S
and	Project:	@aGlance (www.aglance.dk) - research project: 3D terrain visualization, GPS,
2010		video analysis and projection, collaboration
	Roles:	Software Engineer
	Technologies:	C++/Win32, OpenGL, PalCom, cvs, Java
2009 -	Customer:	Brainphant
2010	Project:	Development of 3D game (including construction of proprietary platform from
	1 10,000	scratch) for iPhone and iPad
	Roles:	Managing and development incl. design, programming, texture artwork, 3D
		models, sound effects and music
•	T	ICC Charties C CLI VCada add Dlandar Audacite
	Technologies:	IOS, OpenGL, Objective-C, C++, XCode, gdb, Blender, Audacity

_	1	
2007 -	Customer:	LEGO
2010	Project:	Development of platform and tools for 3D asset management and production
		pipeline for internal use and external partners
	Roles:	Developer, architect, consultant, integration
	Technologies:	C++, C#, ASP.NET, Python, Maya/MEL, Perforce, opengl
	· comologico	own, on, real intern, indigenment, increase, opening
2006 -	Customer:	International telecom organization
2007	Project:	Optimizations and new functionality on proprietary IP stack (Linux, portable,
	1 10,000	C); code generation and reflection
	Roles:	Developer, designer
	Technologies:	C (iso99), gcc/gdb/gcov/gprof, CVS, valgrind, lint, TCP/IP
	1	
2005 -	Customer:	International telecom organization + International telecom/network corporation
2006	Project:	Development of test framework and runtime optimization of mission critical
		Virtual Machine on 64-bit telecom switch + Server applications and adapters
		for charging systems in network systems.
	Roles:	Project manager, architect and developer
	Technologies:	C++, ClearCase, Assembly (Alpha, Itanium) + J2EE / EJB, JBoss, Oracle
2004	Customer:	Danish telecom industries
	Project:	Hardware simulator and test framework (incl. high level test language and
	1 10,000	parser) for telecom platform. Driver development and integration in WinCE
		.Net.
	Roles:	Team lead, designer and developer
	Technologies:	C/C++, embedded
2003	Customori	Large Device industrial automation / algebranics asymptotics
2003	Customer:	Large Danish industrial automation / electronics corporation
	Project:	Embedded software development, including test framework analysis and
		design, tools development (J2SE) and time and space critical implementations
		on several embedded platforms (C and C++, various custom RTOS).
	Roles:	Team lead, designer and developer
	Technologies:	C, C++, J2SE and various custom RTOS
2002	Customer:	Defense industry
	Project:	Defense project running on a mixture of J2EE beans and J2SE clients (Swing
		on Unix) communicating on JMS.
	Roles:	Team lead, designer and programmer
	I IVUICO.	reallifead, designer and programmer
	Technologies:	J2EE, J2SE, JMS
1999 -	Technologies:	J2EE, J2SE, JMS
1999 -	Technologies:  Customer:	J2EE, J2SE, JMS  International telecom organization
1999 - 2002	Technologies:	J2EE, J2SE, JMS  International telecom organization  Large project involving JIT compiler design, implementation and optimization
	Technologies:  Customer:	J2EE, J2SE, JMS  International telecom organization  Large project involving JIT compiler design, implementation and optimization on 64-bit platforms, including experience with capacity critical and mission
	Technologies:  Customer:  Project:	J2EE, J2SE, JMS  International telecom organization  Large project involving JIT compiler design, implementation and optimization on 64-bit platforms, including experience with capacity critical and mission critical systems in the telecom industry.
	Technologies:  Customer: Project:  Roles:	International telecom organization  Large project involving JIT compiler design, implementation and optimization on 64-bit platforms, including experience with capacity critical and mission critical systems in the telecom industry.  Designer and developer
	Technologies:  Customer:  Project:	J2EE, J2SE, JMS  International telecom organization  Large project involving JIT compiler design, implementation and optimization on 64-bit platforms, including experience with capacity critical and mission critical systems in the telecom industry.
2002	Technologies:  Customer: Project:  Roles: Technologies:	International telecom organization  Large project involving JIT compiler design, implementation and optimization on 64-bit platforms, including experience with capacity critical and mission critical systems in the telecom industry.  Designer and developer  C++, ClearCase, Assembly (Sparc, Alpha)
